marko

AR maps for commercial spaces,
built autonomously from floor plans
and a single phone scan.

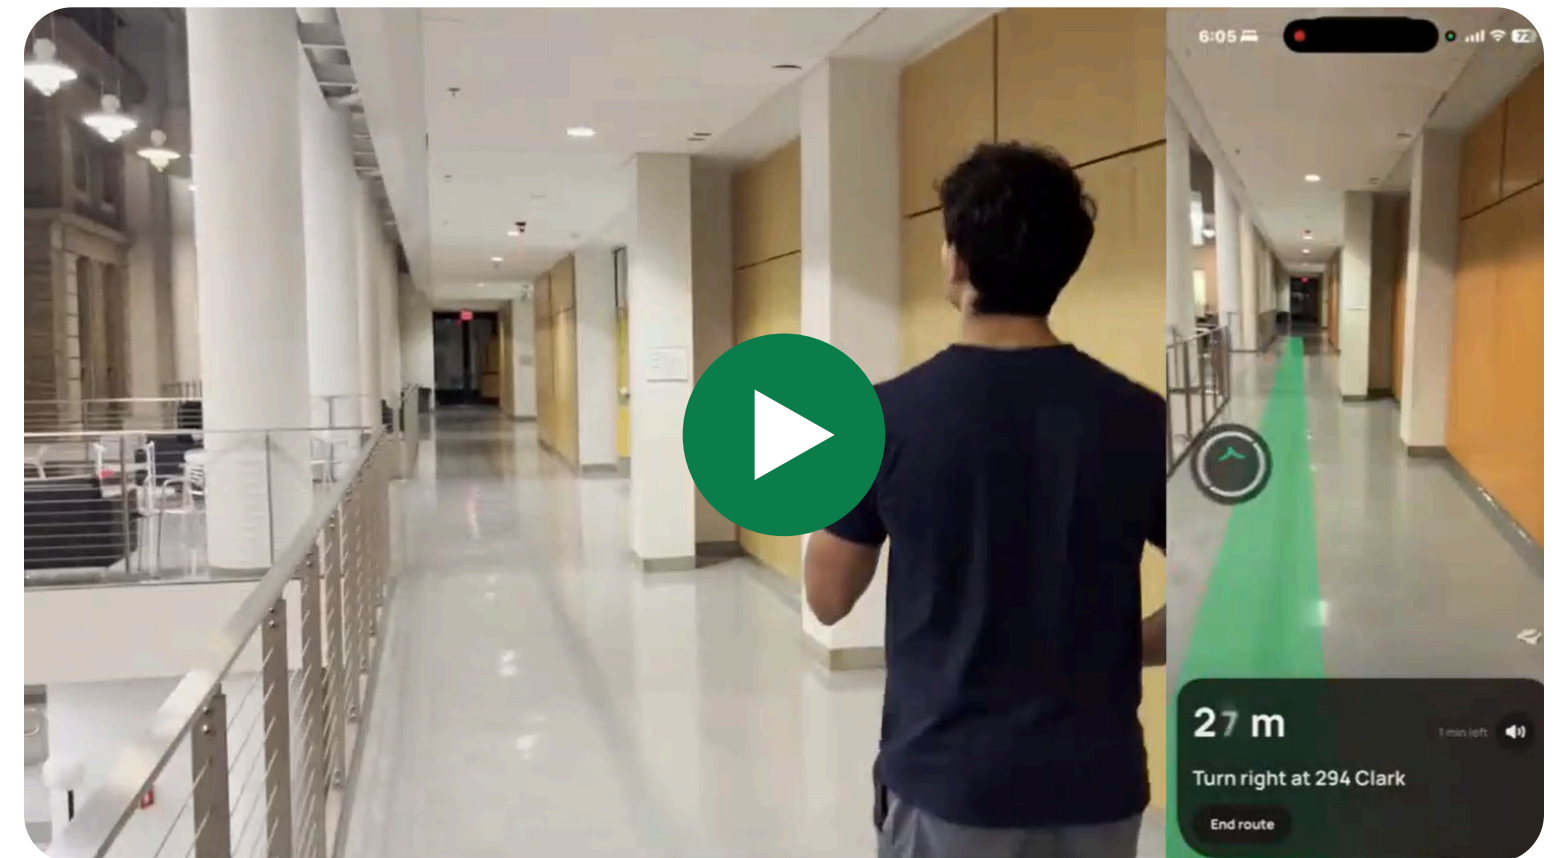

Solution

Indoor maps show you the layout, not where you are or which way to go.

- 1 Scan**
Phone video and floor plans become a digital twin.
- 2 Locate**
Your camera pinpoints exactly where you are inside.
- 3 Guide**
An AR path and an AI assistant take you to your destination.

Malls first, then hospitals, universities and more.

Watch the demo

Filmed in Cornell's Physical Sciences Building.

Venues already pay for wayfinding. They just pay too much.

\$25–41k

what venues already pay each year for wayfinding and foot-traffic tools that do less

73%

of mall rent comes from smaller stores, the ones shoppers struggle to find

\$1.5k

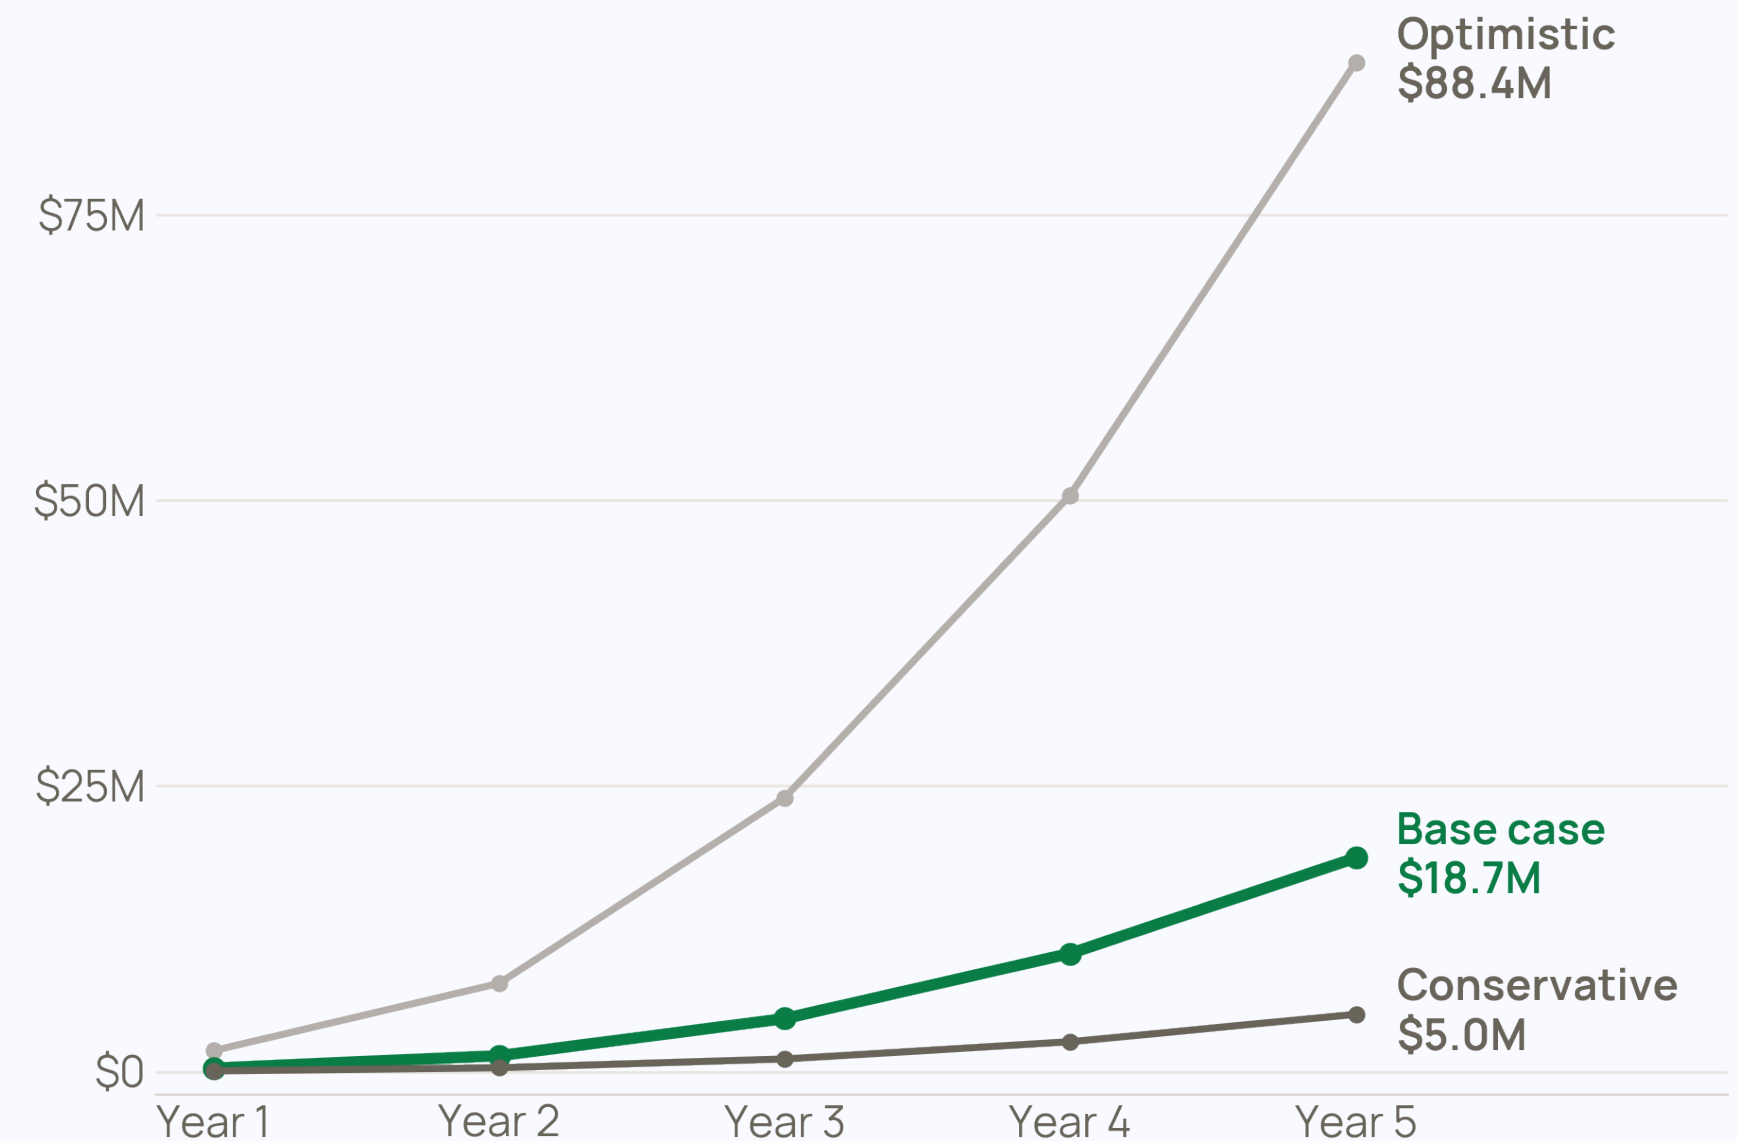

to map a mall with marko, vs. up to \$458k for one beacon-based system

Market opportunity —

Three ways to earn, stacked as we grow: venues pay for navigation and insights, brands pay to be featured, and shoppers redeem in-app offers.

By year five: \$18.7M a year in our base case, with a range of \$5M to \$88M.

Revenue per year, three scenarios

The market opportunity*

*All three figures cover large, multi-level venues (malls, hospitals, stadiums, universities, casinos, convention centres, airports) across all four revenue streams.
SAM is the US only; SOM is about 360 of those US venues by year 5.

Business model

Venue software
Indoor navigation
Visitor analytics
We map the venue
One walk to set up

\$30–36k / venue / year

Featured placement
Stores pay to rank first
Sold via mall media kits
Clearly labeled
Launches at 40+ venues

~\$18k / venue / year

Offers & insights
In-app shopper offers
Store-visit measurement
Opt-in only
We never sell data

\$0.87 / redemption

Plus portfolio deals: one contract rolls marko out across a mall owner's properties.

Competitive advantages

1

What makes us unique?

No hardware, ever

One phone video maps a whole venue.
No beacons, sensors or surveys.

2

How will we outperform?

Cheaper and faster

About \$1.5k to map a mall, vs. \$18k+ for
one kiosk or \$458k for a beacon
system.

3

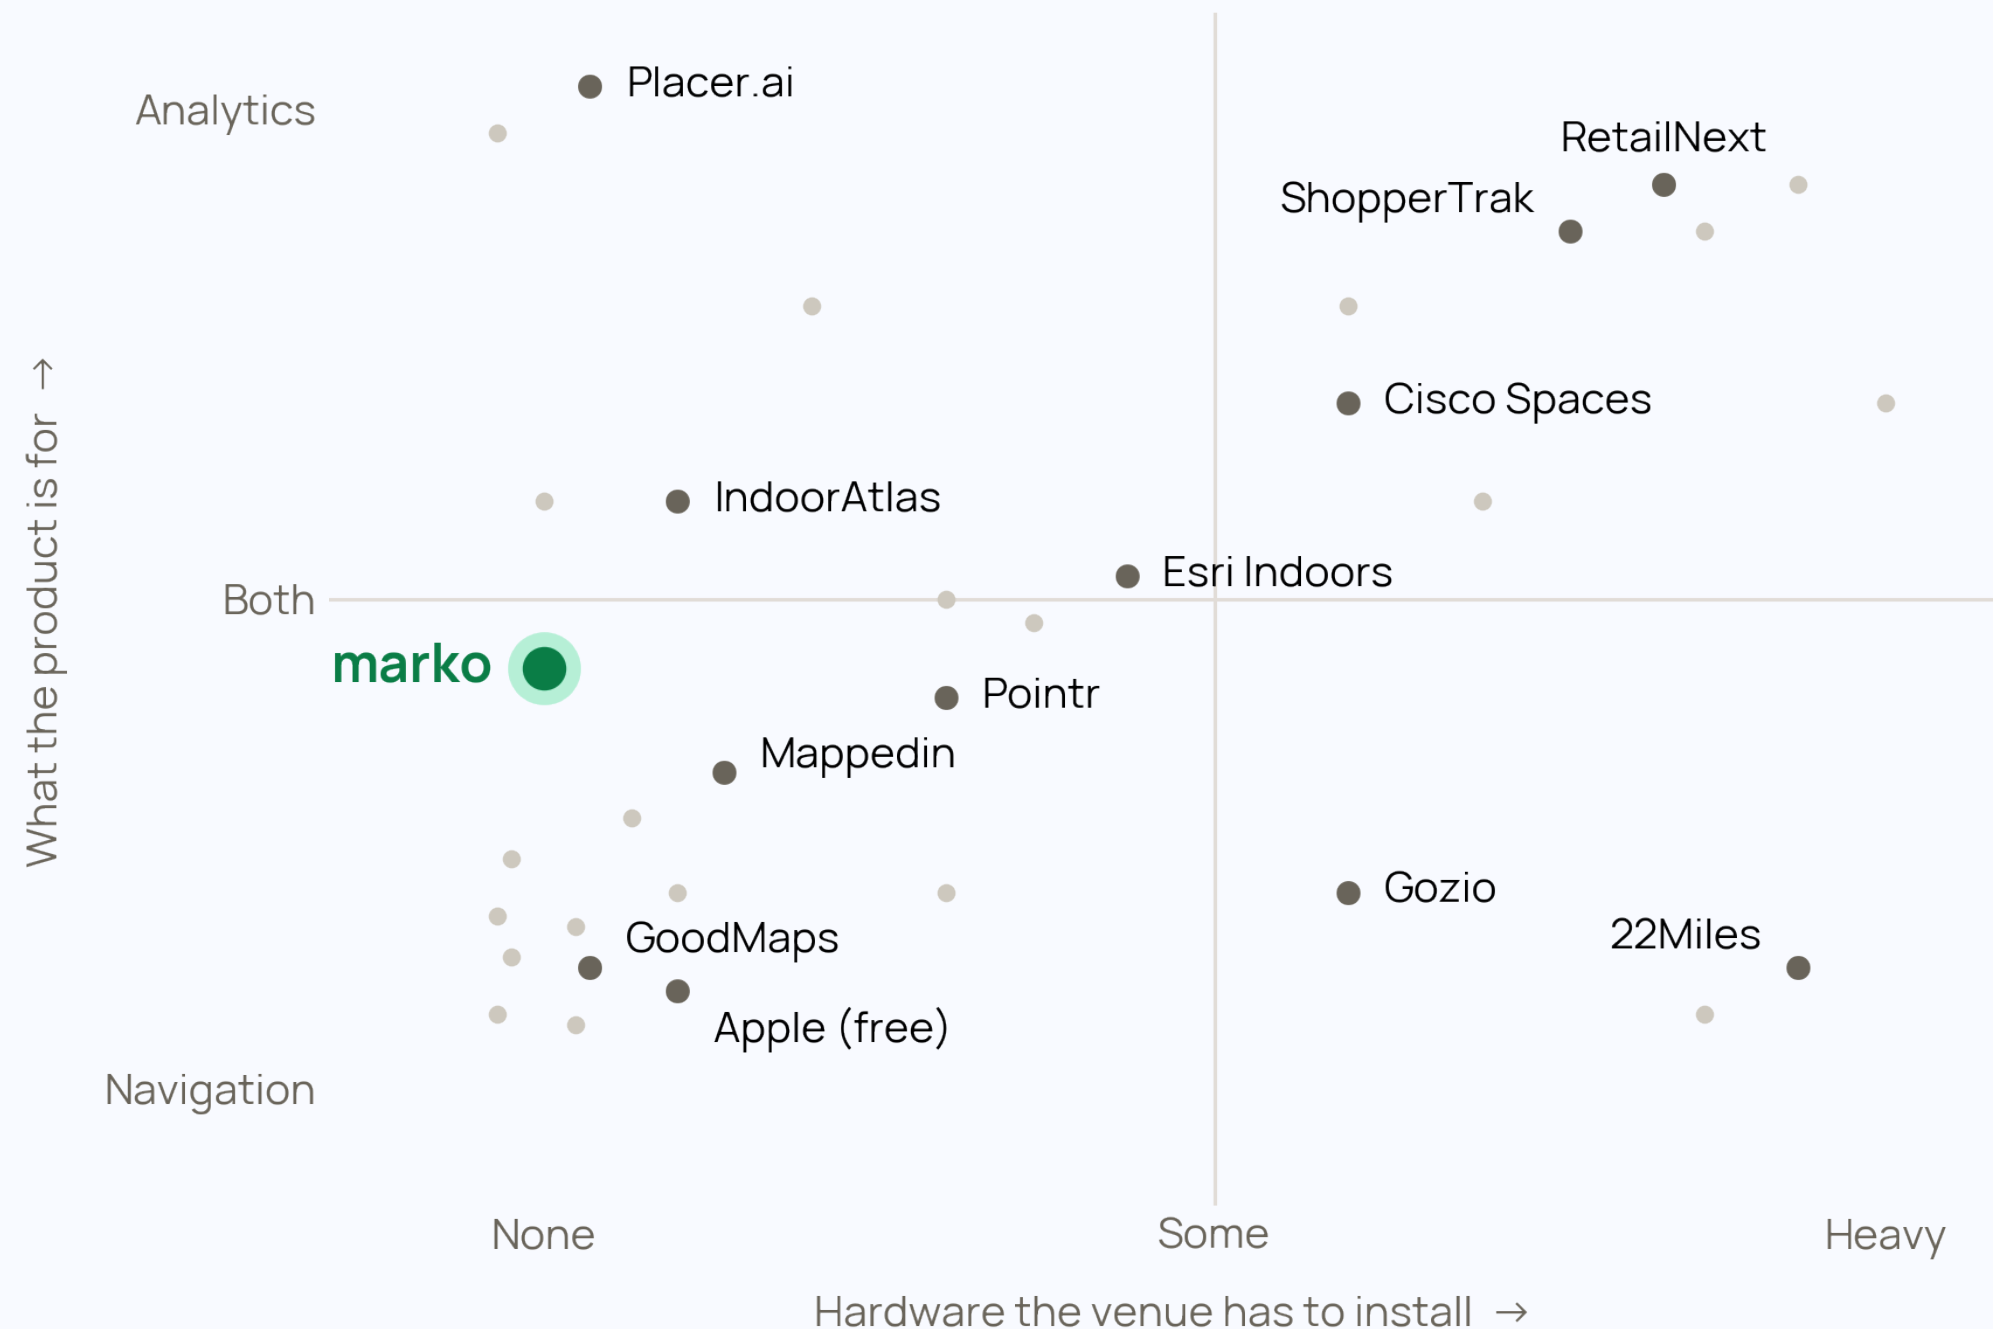

Why are we the best?

Built for the business

Venues see what shoppers search for
and where they get lost, which GPS
data can't show.

A crowded field. A different approach.

Most indoor maps are sold to facilities teams. marko is built to help venues make money.

Cheaper to set up

One phone walk maps the venue, with no RF survey or vendor team.

Run by the venue

A self-serve portal lets venues publish and update their own map.

Data that drives revenue

What shoppers search for and where they get lost, which outdoor GPS data can't see.

Competitors

Our edge: one-walk capture, a self-serve venue portal, and analytics built for the business side.

GoodMaps

Camera-based indoor navigation

Mappedin

Indoor maps for malls

Pointr

Enterprise indoor positioning

Apple Indoor Maps

Free, but needs a Wi-Fi survey

Placer.ai

Foot-traffic analytics

Our product

Feature #1 · AR navigation

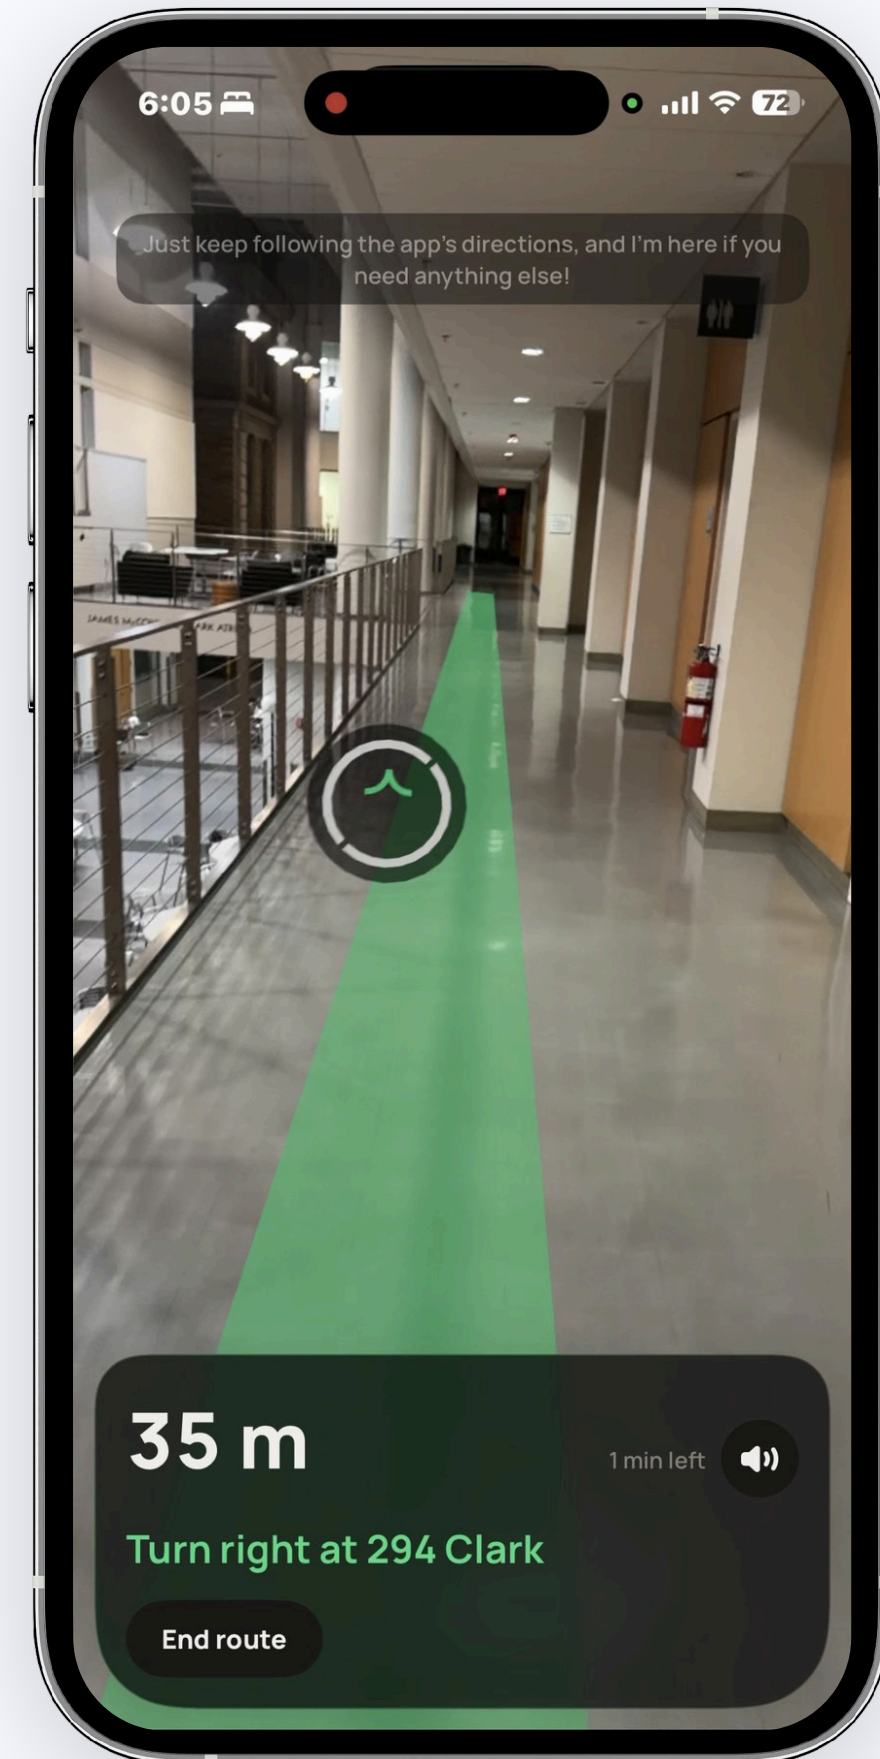

Hold up your phone and marko finds you instantly, no QR codes or beacons, then draws your path.

Feature #2 · AI assistant

Ask out loud, like “where can I grab lunch?”, and get spoken, hands-free directions.

Feature #3 · Commercial dashboard

Malls see what shoppers search for, where they get lost, and which searches turn into visits.
